## PROFESSIONAL PROFILE

**Full Stack Developer** with 10+ years of experience in designing and building scalable enterprise and product-based applications. Strong expertise in **Angular (17+), JavaScript, jQuery, HTML5, CSS3, Bootstrap, AG-Grid, RxJS, and JSON**, along with solid backend development skills using **Java, Spring Boot, Spring MVC, Microservices, Hibernate, MySQL and JPA**. Experienced in creating secure and high-performance **RESTful Web Services**. Skilled in **Spring Security** implementations, including **JWT**, and **Basic Authentication**. Hands-on experience with messaging systems such as **Apache Kafka and RabbitMQ**, and proficient with development tools like **Maven, IntelliJ IDEA, VS Code, JIRA, and Tomcat**. Adept in monolithic and modular architectures, writing clean and maintainable code, and performing unit testing. Strong team collaborator with exposure to Agile methodologies (Scrum, Kanban) and experience mentoring junior developers.

## Technical Skills

**Backend:** Java 17, **Spring Boot (Security, AOP, Exception Handling)**, REST APIs, EJB, Hibernate, JPA/Hibernate

**Frontend:** Angular 17+, JSF, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, RxJS, AG-Grid Library

**Database:** MySQL, PostgreSQL, SQL Server.

**Tools & DevOps:** IntelliJ IDEA, VS Code, Git, Jira, Kubernetes, Helm, Docker, Linux

**Cloud/Other:** Power BI, Apache POI, JBoss, Tomcat, Kafka, Swagger

**AI & Machine Learning:** Amazon Q, ChatGPT

**Testing tools:** JUnit, Mockito

## Work experience

### Senior Software Developer

July 2021 - Present

Ericsson India Pvt. Ltd.

**Project:** CCMS – Extended Team Collaboration with Sweden

**Role:** Full Stack Developer / Team Coordinator

- Led a team of 4 members (3 developers and 1 tester) to deliver end-to-end project solutions with high quality and timely delivery.
- Architected a new **microservice** using **Java Spring Boot** (Security, AOP) and integrated **Kafka** for asynchronous, scalable, and fault-tolerant inter-service communication.
- Developed robust backend APIs using **Spring Boot, REST, and JPA/Hibernate**, ensuring efficient data processing, optimized queries, and scalable business logic.
- Designed and implemented front-end features using **Angular**, including reusable components, reactive forms, interceptors, service layers, state management, and dynamic data-driven UI screens for enhanced user

experience.

- Acted as the primary communication bridge between the **India team** and the **Sweden client** team, handling requirement clarifications, solution discussions, and progress updates.
- Coordinated requirements, feedback loops, sprint schedules, and delivery timelines across cross-functional teams to ensure smooth execution.
- Managed end-to-end deployment using **Docker and Kubernetes**, including Helm chart configurations and container orchestration strategies.
- Used **Git** for version control and **Jira** for sprint task management. Actively participated in daily stand-ups, sprint planning, backlog grooming, and code reviews under Agile methodology.
- Leveraged **AmazonQ, Codium and ChatGPT** to accelerate development, debug complex issues, and improve code quality with AI-assisted insights.
- Skilled in Core Java concepts including **Streams, Collections, Generics, Functional Programming**, ensuring high-performance and maintainable backend modules.

#### **Project: Project On-boarding Accelerator (POA)**

##### **Role: Full Stack Developer / Team Coordinator**

- Developed the **Project On-boarding Accelerator**, an automation tool used across all MAs in BDGS to streamline and standardize new project onboarding activities.
- Integrated the tool with **GC (Global Chronos)** to detect newly created FAS/Projects and automatically trigger onboarding workflows.
- Automated the creation of **EPICs, Story and Tasks in JIRA**, assigning them directly to the Industrialization & Automation team to ensure smooth, consistent onboarding execution.
- Implemented backend services using **Java, Spring Boot, REST APIs, and JPA/Hibernate** to handle project detection, task creation, and workflow automation with high reliability.
- Integrated with multiple enterprise tools—**GitLab, Rosetta, AAT, CDD, QMT**—to automate project setup processes such as repository creation, access configuration, metadata updates, and quality pipeline setup.
- Built responsive UI components using **Angular** to monitor onboarding progress, view logs, and manage configurations.
- Improved operational efficiency by eliminating manual work, reducing onboarding time, and ensuring standardized processes across all BDGS units.
- Utilized Agile practices with **Git and Jira**, performing code reviews, sprint planning, and continuous delivery to maintain high-quality deliverables.

**Explore my complete project portfolio:**

**Senior Software Developer**

**June 2019 - July 2021**

**Satin Creditcare Pvt. Ltd.**

#### **Project: Loan Management System (LMS) / TARASHNA (TSL)**

##### **Role: Full Stack Developer / Team Coordinator**

- Led the development and enhancement of a microfinance Loan Management System used by **5,000+ field employees**, ensuring seamless operations across loan sourcing, approvals, disbursements, and reporting.
- Designed and implemented modules such as **Group Loan Application, Loan Card, PAR Reports, Cashbook, Death Report**, and other financial analytics, improving data accuracy and operational efficiency.

- Integrated **Web Services** to enable both **online and offline** workflows, ensuring uninterrupted access for field teams in remote locations.
- Developed secure backend APIs using **Java, Spring Boot, REST, JPA/Hibernate**, and optimized database interactions to deliver high-performance financial processing.
- Coordinated API integrations with third-party services such as **PAN Card validation** and secure loan disbursement workflows with **IDFC, RBL, and IBL**, automating manual processes and reducing operational costs.
- Improved system reliability by streamlining reporting automation and introducing error-handling and validation mechanisms across critical loan operations.
- Contributed to UI development and enhancements using **Angular**, ensuring a user-friendly and efficient experience for field officers and financial teams.
- Participated in Agile ceremonies, managed tasks through **Git and Jira**, and ensured high-quality deliverables through regular code reviews and testing coordination.

#### Senior Software Developer

May 2016 - June 2019

PeopleStrong HR Services

Project: (AltWorklife)

Role: Full Stack Developer

- Refactored all **REST APIs** using **Java Spring Boot**, improving performance by **25%** and reducing latency.
- Improved code reusability and maintainability by creating modular **Angular components and services**.
- Improved code reusability and maintainability by **refactoring JSF pages and backing beans into modular, reusable components and services**.
- Spearheaded **API integration between PeopleStrong and ClearTax**, enabling portal redirection, tracking user interactions, and storing purchase data in the database for analytics.
- Exposed APIs for **mobile integration** and successfully managed end-to-end integration of the **Recruit Module** ensuring seamless data flow and functionality.
- Conducted **manual testing** for production issue tracking.
- Collaborated closely with QA, product owners, and cross-functional teams in **Agile/Scrum** to ensure timely delivery of features.
- Mentored junior developers and conducted **peer code reviews** to enforce coding standards and best practices.
- Worked as **L2 support**, handling high-priority production issues and coordinating between L1 and L3 teams to ensure timely resolution and improved system stability.

#### Software Developer

Aug 2015 - May 2016

Rhythm Technology

Project: DemoGo – Marketing & Audio Conferencing System

Role: Full Stack Developer

- Designed and implemented a scalable **audio-conferencing software** enabling users to schedule, join, record, and manage conference calls seamlessly.
- Developed backend modules using **Java, Struts2.x**, and applied solid OOP principles to build a clean, modular, and maintainable architecture.
- Implemented key features such as **conference scheduling**, participant management, call recording, call logs, and real-time session handling.

- Built front-end components using **Ajax, JQuery, HTML, CSS**, including dynamic dashboards, scheduling screens, audio controls, and session monitoring interfaces.
- Integrated audio streaming and recording capabilities while ensuring system stability, high concurrency handling, and secure session management.
- Optimized system performance by implementing efficient data models, caching strategies, and asynchronous processing for smooth conferencing experience.
- Ensured code quality through unit testing, code reviews, and adherence to best practices in design patterns and OOP methodology.

## Key Strengths

---

- Training the new members in the team and getting them productive quickly.
- Ability to work independently and within a team.
- Willingness to learn new tools and technologies.
- Self-motivated and goal oriented.
